GENERAL NOTE

Since public-land transactions are reported at many different stages of processing, statistics released by the various land-management agencies or by the same agency in different years must be checked carefully for comparability. The following paragraph, detailing the stages at which the data in the Appendix were reported, has therefore been prepared to clarify seeming discrepancies in published figures and to facilitate the use of these tables in conjunction with reports from various agencies.

Areas officially surveyed are reported as of the date of acceptance of the plat of survey by the Director of the Bureau of Land Management, but surveys in the field are reported as of the date of completion in the field. Withdrawals, restorations, and classifications are reported as of the date of the act of Congress, proclamation, or order (Executive, Departmental, or Public Land Order) which determines the status of the lands involved. Patents and certifications are reported as of the date of issuance, as are deeds, permits, leases, licenses, and timber-sale contracts. Entries, filings, and original selections are reported at the end of the accounting process, that is, when the required moneys are covered into the Treasury. Exchanges and grants are reported as of the date of the patent or certification conveying the exchanged lands to non-Federal owners. Receipts are reported as of the date they are covered into the Treasury. Lands found suitable for classification are reported as of the date of action, as are "O. and C." timber sales and collections. "O. and C." income, however, is reported as of the date the money is covered into the Treasury.

a/ Prepared by the Bureau of the Census in collaboration with the General Land Office and with the financial assistance of the Work Projects Administration to supplement the Sixteenth Decennial Census. This is the first basic recomputation of land and water areas of the United States since 1880, and supersedes the areas of States and Territories reached by joint calculations made in the General Land Office, the Geological Survey, and the Bureau of the Census and first published in 1906. These new computations are based on a set of Coast and Geodetic Survey aeronautical charts on a scale of 1:500,000. Areas were computed by means of international geodetic tables, supplemented by planimeter measurement and by reference to the plats of survey executed by the General Land Office.

-Continued-

b/ Land area is defined to include: Dry land and land temporarily or partially covered by water, such as marshland, swamps, and river flood plains; streams, sloughs, estuaries, and canals less than 1/8 of a statute mile in width; and lakes, reservoirs, and ponds having less than 40 acres of area
